Demo Report

Rolls-Royce Ghost

Model Year: August 2016

Engine Size: 6592cc

**WORKS WITH BOTH
PETROL AND DIESEL
ENGINE TYPES**

OXYTANE

Rolls-Royce Ghost with Oxytane®

We carried out mixed driving tests with and without Oxytane in the tank. Manufacturer's guidelines state 14.2L of fuel for 100km of driving.

We treated the fuel with Oxytane - used on a 5000:1 ratio (Fuel to Oxytane) fuel tank capacity 82L with 16.5ml of Oxytane fuel treatment.

The results were truly astounding. We gained a 27% increase in fuel economy which provided 100km of mixed driving for just 10.4L of fuel consumed.

Furthermore, there was a clear difference in the overall driving experience. Even with this Rolls-Royce being a premium luxury car we could still feel a difference in its performance with noticeable increased power and a smoother, quieter engine. Rolls-Royce make world class cars – on Oxytane the experience coupled with improved fuel economy was out of this world.

“Wow, this was my first experience using Oxytane. Impressed - is an understatement...”
